Education

University College London (UCL) 2026 - 2027

MSc in Data Science and Machine Learning

University of Michigan, Ann Arbor 2023 - 2026

BS in Data Science

- Relevant Coursework: Programming and Intro to Data Structures, Data Structures and Algorithms, Statistics and Artificial Intelligence, Linear Algebra, Regression Analysis, Machine Learning, Web Systems, Computational Methods, Information Retrieval, Conversational AI, Game Development.
- GPA: 3.66/4.0 | University Honors (Freshman, Sophomore, Junior).

Projects

Michigan Data Science Team 2024.09 - 2025.05

Spotify Music Data Analysis (Project Lead)

- Extracted user listening history via Spotify API, managed data using SQL, and utilized visualization tools to illustrate user listening preferences and trends.
- Designed recommendation algorithms, generating personalized playlists based on user behavior features.

Insta485 Full-Stack Web Development 2025.09

- Implemented decoupled front-end and back-end architecture using React.js and Fetch API, supporting real-time likes, comments, and infinite scroll without page reloads.
- Integrated SQLite3 database for user registration, session management, and image upload functionalities.

VeroEat Food Safety Assistant App 2026.01 - Present

- Developed barcode scanning function, providing real-time allergen alerts based on multi-user profiles and intelligently recommending safe alternatives.
- Designed the Inventory module to track purchase history, providing recall alerts for purchased products.

Social Media-Based Mental Health NLP Retrieval System 2026.01 - Present

- Designed keyword retrieval and context analysis based on datasets to extract semantic features from user comments and posts, reducing semantic errors in natural language processing.
- Built a multi-dimensional evaluation model to predict users' potential mental distress and MBTI personality traits without clinical diagnosis, generating highly personalized recommendations.

Independent Game Development & Design 2025.11 - Present

- **Cat Not Found (Godot):** 2025 TapTap Spotlight GameJam entry. A 2D pixel-art puzzle narrative game. Conceptualized the world-building and narrative logic, created all pixel art and scene layouts, and programmed puzzle mechanics and interactive logic.
- **The Legend of Zelda Rebuild (Unity):** Responsible for level building, enemy generation, and scene interactions; Expanding the game with custom level features and new mechanics.
- **AnotherMe (Unity):** Independently developed a 2D side-scrolling puzzle game. Designed the mirroring mechanic, requiring players to coordinate and control dual characters to complete complex levels.

Skills

Programming & Tools: Python, C++, C, SQL, R, JavaScript, HTML/CSS, MATLAB, PyTorch, React, Flask, Godot, Unity, LaTeX

Languages & Certifications: English (TOEFL 115) | Japanese (JLPT N3) | **Coursera:** Python Data Structures, Intro to HTML5/CSS3 | **Kaggle Certifications:** Intermediate Python, Pandas, Intermediate Machine Learning, Data Visualization
